

# Recruitment task

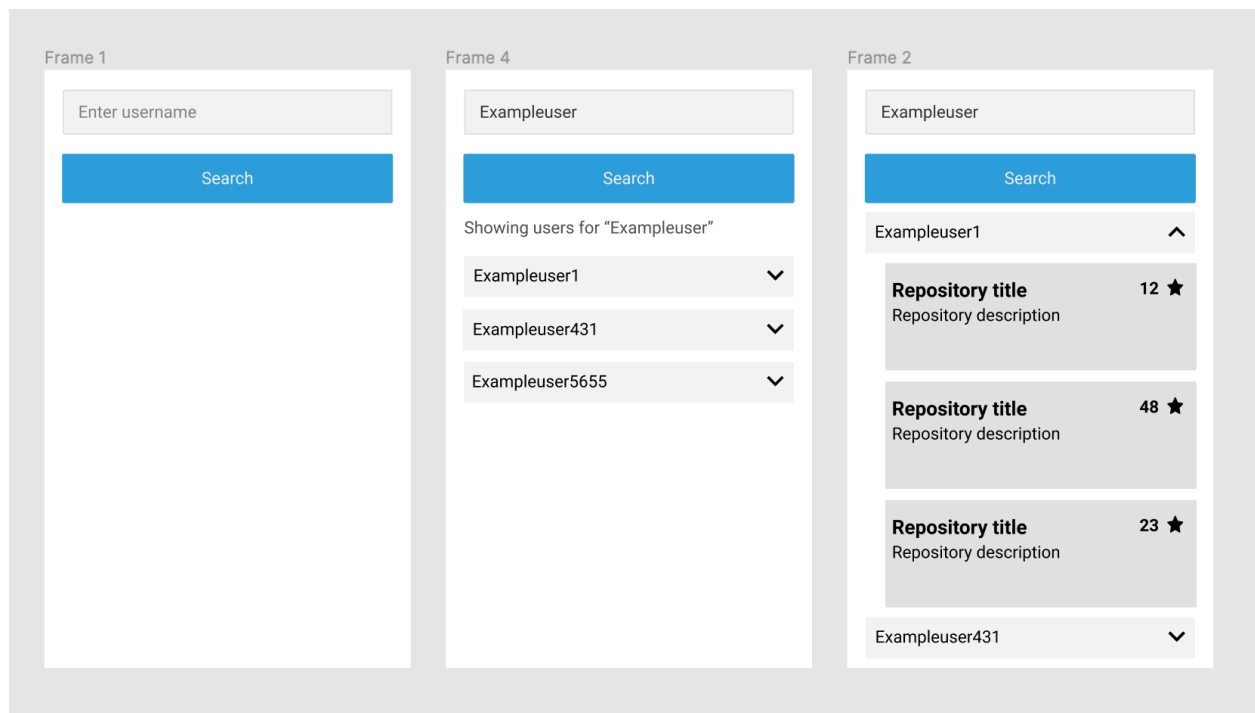

Project name: GitHub repositories explorer

## Description

Create React application which integrates with [github.com](https://github.com) API and allows user to search for up to 5 users with a username similar to the value entered in text input and then on click, display repositories (no limit on displayed repositories amount) for selected GitHub user

API docs URL: <https://developer.github.com/v3/>

## Designs

## Requirements

- Use React,
- Use TypeScript,
- You may use other libraries of your choice for forms, styling, testing, state management, etc.
- The app must be available as a public GitHub repository,
- The app should be hosted and publicly accessible by URL (i.e. via GitHub pages),
- A proper README must be provided,
- Errors should be handled appropriately,
- Good UX practices should be implemented (i.e. keyboard events handling, loading states),
- Only English should be used.

## Nice to have

- Unit and integration tests.

## Tips

- Don't forget about the mobile view,
- Use that as an opportunity to showcase your best skills.
